RHODES

ERIKS bv, part of ERIKS group nv, an international group of trading companies, is the supplier of an extensive range of technical components and customer-oriented service. Know-how of products and their applications together with professional logistics are our strenght and are offered to you from Alkmaar.

Product lines besides valves are: seals, gaskets, instrumenation, industrial hoses, plastic piping systems and industrial plastics.

For the (petro)chemical, oil and gas industry ERIKS has a wide range of ANSI valves available.

ERIKS' services and added value

It speaks for itself that not only the 'physical product' is part of our scope of supply. In our point of view the physical product will have to meet the highest technical and quality standards that are being used in the market. To make it a 'complete product' we extend our scope of supply by a large number of services.

- ERIKS is a solid and financially strong organization which gives you the assurance of continuity. The ERIKS QA system is according to ISO 9002 and approved by Lloyd's.
- We share our know-how about our products and their applications with our customers.
- The wide and in-depth ERIKS range consists of products from leading manufacturers which meet all international regulations and standards. Many of our manufacturers have been approved by well-known (petro)chemical multinationals.
- ERIKS has short communication lines and quick response times.
- Modern state-of-the-art IT system. ERIKS works with the SAP ERP system which gives us good possibilities to work towards a digital exchange of (order) information.
- Experience with key supply contracts. During the last years ERIKS has gained a number of key supply contracts of which we have learned a lot about the details that are important to make such contracts a success for both parties.
- Project Management. Valve and gasket supply during a maintenance stop or a new project demands special attention and treatment. We have built up experience in this field as well.
- A broad stock range, nearby and direct available for you at the ERIKS SERVICECENTER RIJNMOND.
- Field Service Team. To assist on site in case of technical failure of a product supplied by ERIKS, we have a group of experienced and VCA approved service mechanics to our disposal.
- In our well-equipped workshop in Alkmaar we daily provide our valves with actuators and accessories in accordance with customer specifications, including testing and regulation. Our own staff also adjusts safety valves, approved by the Dutch Stoomwezen Rules.
